Test Review: Geometry L2
Period 1,3

TEST DATE: Tuesday May 10

Things it would be a good idea to know – HOW TO SOLVE RIGHT TRIANGLES

Test Outline

10 problems, each worth 10 points.

On this test, you will have to solve for missing sides or angles of right triangles using Pythagorean Theorem, Special Right Triangles or SOHCAHTOA

Practice problems attached.
Find the missing side lengths. Leave your answers as radicals in simplest form.

1) \[
\begin{align*}
\triangle & \quad x \quad 3 \\
\quad & \quad 60^\circ \\
\quad y &
\end{align*}
\]

2) \[
\begin{align*}
\triangle & \quad y \quad 3 \\
\quad 30^\circ & \quad x \\
\quad & \quad 3
\end{align*}
\]

3) \[
\begin{align*}
\triangle & \quad x \quad y \\
\quad & \quad 30^\circ \\
\quad & \quad 4\sqrt{3} \\
\quad & \quad 3
\end{align*}
\]

4) \[
\begin{align*}
\triangle & \quad 8\sqrt{3} \quad 30^\circ \\
\quad & \quad x \\
\quad & \quad y
\end{align*}
\]

5) \[
\begin{align*}
\triangle & \quad y \quad 8 \\
\quad x & \quad 60^\circ
\end{align*}
\]

6) \[
\begin{align*}
\triangle & \quad 5\sqrt{3} \quad 60^\circ \\
u & \quad v \\
\quad & \quad w
\end{align*}
\]

7) \[
\begin{align*}
\triangle & \quad \frac{5\sqrt{2}}{2} \quad 45^\circ \\
x & \quad y
\end{align*}
\]

8) \[
\begin{align*}
\triangle & \quad a \quad \frac{10\sqrt{6}}{3} \\
b & \quad 60^\circ \\
\quad & \quad b
\end{align*}
\]

9) \[
\begin{align*}
\triangle & \quad \frac{3\sqrt{3}}{2} \quad 60^\circ \\
a & \quad b
\end{align*}
\]

10) \[
\begin{align*}
\triangle & \quad \frac{7}{2} \quad 60^\circ \\
x & \quad y
\end{align*}
\]
Steps to solving trig word problems

1. Draw a picture. (Right triangle)
2. Label the given parts.
3. Set up the trig ratios and solve.

Ex1) Find the angle of elevation if you are standing 400 ft. away and the building is 850 ft. tall?

Ex2) From the top of a tower, the angle of depression to a stake on the ground is 60°. The top of the tower is 80 feet above ground. How far is the stake from the foot of the tower?

Ex3) A ladder leaning against a house makes an angle of 30° with the ground. The foot of the ladder is 7 feet from the foot of the house. How long is the ladder?
Ex4) You are a block away from a skyscraper that is 780 feet tall. Your friend is between the skyscraper and yourself. The angle of elevation from your position to the top of the skyscraper is 42°. The angle of elevation from your friend's position to the top of the skyscraper is 71°. To the nearest foot, how far are you from your friend?

Sometimes you need to add lines to your drawing to create right triangles.

Find the distance of BC.
Hint: add the altitude from vertex B.
Exercises

1) Use the diagram below to find the distance across the suspension bridge.

2) The length of one ramp is 16 feet. The vertical rise is 14 inches. Estimate the ramp’s horizontal distance and its ramp angle. Does this ram meet the Uniform Federal Accessibility Standards?

3) You want to build a ramp with a vertical rise of 6 inches. You want to minimize the horizontal distance taken up by the ramp but still meet the Uniform Federal Accessibility Standards. Draw a sketch showing the approximate dimensions of your ramp.

In Exercises 2 and 3, use the following information

**Ramps** The Uniform Federal Accessibility Standards specify that the ramp angle used for a wheelchair ramp must be less than or equal to 4.78°.
4) You are in a hot air balloon that is 600 feet above the ground where you can see your friend. If the angle from your line of sight to your friend is 20°, how far is he from the point on the ground below the hot air balloon?

![Diagram showing angle from the line of sight to the friend]

5) The angle from the tee box to the green is 10° on a par 3, 185 yard hole as shown. How much higher is the tee box than the green? Round to the nearest yard.

![Diagram showing angle from the tee box to the green]

6) You are designing a ramp where the horizontal distance is twice the vertical rise. What will be the ramp angle to the nearest tenth of a degree?

![Diagram showing ramp with angle and horizontal distance]
7) A surveyor needs to find the distance BC across a lake as part of a project to build a bridge. The distance from point A to point B is 325 feet. The measurement of angle A is 42° and the measurement of angel B is 110°. What is the distance BC across the lake to the nearest foot?

Use the following information to answer questions 8 through 10

You are watching a fireworks display where you are standing 290 feet behind the launch pad. The launch tubes are aimed directly away from you at an angle of 65° with the ground. The angle for you to see the fireworks is 40°.

8) To the nearest foot, what is the horizontal distance from the launch pad to the point where the fireworks explode?

9) To the nearest foot, what is the height of the fireworks when they explode?

10) What is the measure of angle A?
11) A tree casts a shadow 21 m long. The angle of elevation of the sun is 51°. What is the height of the tree?

12) You are flying a kite and have let out 80 m of string. The kite’s angle of elevation with the ground is 40°. If the string is stretched straight, how high is the kite above the ground?

13) An airplane climbs at an angle of 18° with the ground. Find the ground distance the plane travels as it moves 2500 m through the air. Give your answer to the nearest 100 m.
